IRELAND'S

PLUMBING & HEATING TRADE EVENT

27-28 MAY 2015
CITYWEST HOTEL, DUBLIN

**TWO
DAY
EVENT**

**IRELAND'S PLUMBING & HEATING
TRADE EVENT IS A MUST-ATTEND
EVENT FOR ANYONE INVOLVED IN THE
PLUMBING AND HEATING INDUSTRY.**

Now celebrating its second year, and going from strength to strength, the event promises a mega mix of super show offers and discounts, exhibitors showcasing exciting new products and services, and valuable networking opportunities. Add to that an assortment of hands-on demonstrations, trade talks and training advice, and you've got plenty of water-tight reasons to attend this year's event!

PRE-REGISTER

THE FASTEST WAY TO PRE-REGISTER
IS ON OUR WEBSITE AT
WWW.PLUMBINGMAG.COM

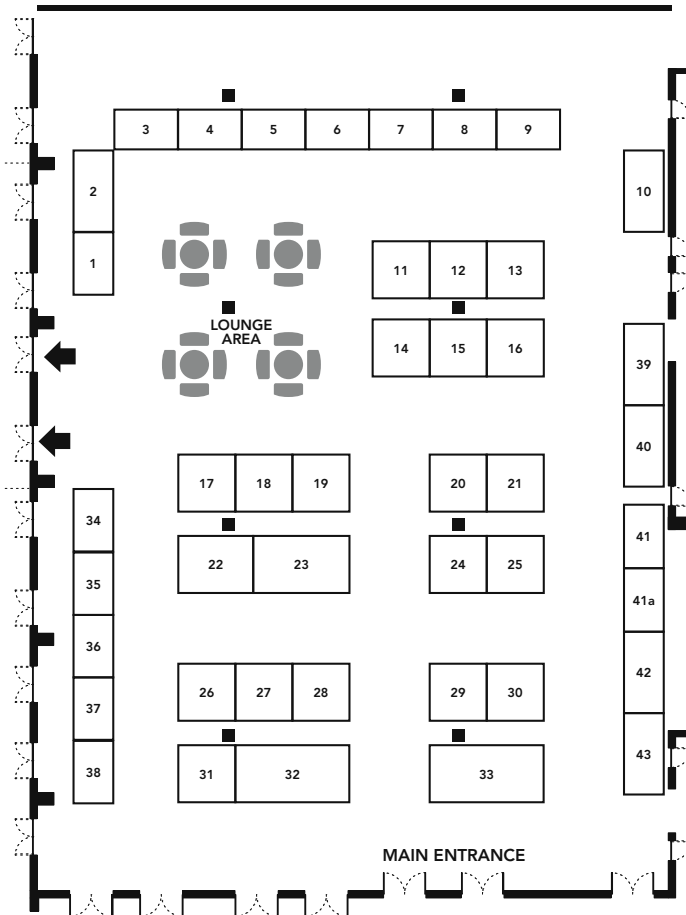

YOU CAN ALSO E-MAIL
GEMMA@KMP.LTD.CO.UK OR
TELEPHONE 01 696 8319.

REGARDLESS OF YOUR CHOICE, A
BADGE WILL BE WAITING FOR YOU
AT THE REGISTRATION DESK.

**DON'T FORGET, IF YOU DON'T
PRE-REGISTER YOU CAN STILL COME
ALONG – SIMPLY FILL
IN A FEW DETAILS AT THE
REGISTRATION DESK.**

NEW PRODUCTS, EXTENDED WARRANTIES AND THE TRIPLE A CAMPAIGN FOR 'ACCREDITED AUTHENTIC ASSURED' PRODUCTS WILL TAKE CENTRE STAGE IN DUBLIN...

Quality and service from Altecnic

With more than 25 years working closely with plumbing and heating customers in Ireland and Northern Ireland, leading manufacturer Altecnic continues to make its mark as a reputable and trusted brand.

Placing quality and service at its core, the company is working hard to raise awareness for the importance of installing only certified and accredited plumbing and heating products.

In 2014, Altecnic embarked on a campaign to highlight its Triple A stamp for 'Authentic Accredited Assured' - which continues to emphasise the increasing problem of sub-standard 'looky likey' products flooding the market.

Altecnic will be using Ireland's Plumbing & Heating Trade Event in Dublin as a platform to highlight these messages to the market, plus introduce the latest addition to its DirtMag range and the news on the extended warranty of its Reflex Expansion Vessel.

National Sales Manager, Mark Mogey, said, "These are exciting times for Altecnic in Ireland. With a record number of our tried, tested and trusted products being sold, our range is continually evolving and we plan to unveil additional products throughout the course of the year.

"Our parent company, Caleffi, is recognised as being the market leading manufacturer within the HVAC market and we are also

fortunate to have a very successful relationship with IMIT, supplying its mechanical thermostat range. "Both of these brands complement Altecnic's commitment to delivering well manufactured, high quality products which have been through the rigorous assessment processes needed to gain full accreditation.

"Altecnic has established an excellent reputation across Northern Ireland and the Republic of Ireland over the past 25 years, and we plan to carry on building on that reputation by implementing a number of initiatives which are aimed at supporting and rewarding the future of plumbing in Ireland." Part of the company's plans is to support the next generation of heating and plumbing professionals. Altecnic is continuing to sponsor colleges in Northern Ireland and will be announcing the winners of its search to find the Heating and Plumbing Apprentice of the year, a competition which is taking place between colleges that run plumbing and heating qualifications. As well as highlighting its Triple A campaign, Altecnic will be showcasing DirtMag IQ Prime, the latest addition to its comprehensive range of magnetic dirt and air separation products for domestic and

commercial systems.

Manufactured by Altecnic's sister company, Caleffi, the new addition is made from a mixture of brass and effective composite materials, offering a cost effective option without compromising on the functionality and effectiveness that Altecnic customers have come to expect from the existing range.

In addition, Altecnic will be announcing the extended warranty covering its popular Reflex Vessel. Proven to last longer and perform more efficiently than traditional air

filled vessels, Reflex will now be covered for five years.

"We will also be showcasing the Caleffi 533h Series of WRAS approved Pressure Reducing Valves that now operate up to 80°C, plus our tried and tested Caleffi Thermostatic Mixing Valves accredited to the highest regulations of TMV2, TMV3 and WRAS," Mark added.

The Altecnic team is inviting visitors to discuss the accredited product range, see the working model of DirtMag,

find out more about product development and enter the company's competition to win an iPad.

JOHN GUEST SPEEDFIT LTD - STAND 4

STAND CONTACT: IAN KELLY

JG SPEEDFIT BOASTS AN EXTENSIVE RANGE OF PLUMBING AND HEATING PRODUCTS, INCLUDING EASY-TO-USE PLASTIC PUSH-FIT PIPING SYSTEMS...

Efficiency and reliability with John Guest's plumbing solutions

This year's Ireland's Plumbing & Heating Trade Event in Dublin will see John Guest promoting its extensive product portfolio, including the iconic JG Speedfit brand.

For more than 50 years the John Guest group of companies has been manufacturing push-fit fittings, pipe and plastic plumbing systems to a wide variety of industries and applications, such as drinks dispense, plumbing, pneumatics, compressed air systems, water purification, drinks vending, automotive and telecommunications.

Headquartered in West Drayton, the company has a global presence with offices in Europe, Asia, North America as well as Australia and New Zealand. Invented by John Guest, the now famous 'Super Speedfit' tube connector concept was introduced to the UK market in 1974. The new product was able to reduce assembly times to a few seconds with an instant tube-coupling system, which needed no tools for making a connection or disconnecting.

With significant engineering expertise

subtly hidden behind the John Guest push-fit concept, the uniqueness of each JG connector lies within its high reliability of performance, longevity of service and suitability for all sorts of industries.

The JG Speedfit plumbing system has been adopted for the supply of hot and cold water in domestic and commercial applications for many years, while the push-fit technology is equally suitable for installations making use of both copper and plastic pipes.

RELIABILITY

The benefits in labour saving and reliability offered by John Guest's fittings allow for the old methods of tube connection, such as compression and solder, to be replaced by reliable, time and cost-efficient push-fit technology solutions. Before the introduction of the plastic push-fit fitting, joining pipes in a plumbing circuit used to be a very time-consuming activity, requiring a high degree of skills and experience for

adequate installation. Soldering copper joints involved the use of numerous tools such as blowtorch, heavy-duty pipe cutters, solder, emery paper, flux, etc. Such an installation process not only entails a high

level of competency, but is also very slow, posing a certain health hazard on the plumber and allowing minimal flexibility if the system needs to be altered at any given time. Accommodating a vast array of industries, the plastic push-fit has come a long way from an idea to a unique and truly innovative solution, with John Guest making and selling more push-fit fittings per year than anybody else in the world.

The billions of John Guest fittings currently in use around the globe on a wide variety of application types have gained the brand worldwide recognition as the industry's best.

VOKÈRA - STAND 2

STAND CONTACT: NEIL GAFFNEY

Advice on ErP

Vokèra will be providing advice and information about ErP (Energy-related products) on stand 2 at the show.

A piece of mandatory EU legislation applicable in 28 EU countries, it will govern the ecodesign and energy labelling of space and water heating products. In layman's terms, Europe has decided that the time has come for gas boilers, oil boilers and heat pumps to carry energy labels similar to that appearing on household appliances, such as washing machines, tumble dryers etc. In an effort to define minimal levels of efficiency, the labels will include energy consumption, CO2 emissions, and levels of noise. Europe has ruled that all boiler manufacturers must fit a low energy modulating pump into system boilers and combination boilers, where previously a

basic circulating pump would suffice. The largest consequence of this is obviously the cost at production level. A cost so substantial, that it has led to a very significant price increase from all manufacturers of gas and oil boilers. All the low-energy modulating pumps are more than double the cost of a standard circulating pump, which means the factory cost increase becomes a large percentage of the total value of the boiler. The hidden cost that goes unnoticed is the huge project behind the scenes to re-code all products for re-launch under ErP, redesign wiring and introduce the new component into production. The increased labour costs alone at factory level to administer this project are staggering. Every single product code will change as an ErP version becomes available. New literature, barcoding,

communications etc are all adding to a very big investment in conforming to an ever-changing Europe.

The faster alternative to tiles

Visitors to Ireland's Plumbing & Heating Trade Event, Dublin will be able to find out more about the innovative multiPANEL range.

multiPANEL is a 9mm WBP plywood core wall panel, bonded with a choice of 32 laminate finishes. It is simply bonded to the wall and connects together with aluminium sections which are silicone sealed. During 2014, multiPANEL was installed in over 125,000 homes. Fitters like using multiPANEL because it is quicker to fit than tiles while end users love it because it simply wipes clean, with no visual deterioration. multiPANEL saves a lot of time and money in comparison to tiling, and is a more hygienic solution with nowhere for dirt or mould to gather. The same could be said for PVC panelling, so why use multiPANEL instead of PVC? Well, here's a few reasons why:

- Longevity – multiPANEL is a more durable product, and better for fixing into.
- Joints – PVC cladding is usually 250mm or 1m wide, resulting in multiple vertical joints, and/or joints within a 1200mm shower enclosure. multiPANEL is 1200mm wide, with a precisely engineered, and barely visible 'hydro-lock' T&G joint.
- Aesthetics – advances in laminate production over recent years have seen an exciting array of textured, sparkle, pearlescent and iridescent finishes,

providing a real feel of luxury. We can even produce bespoke panels from digital photographs.

Stocked in Ireland, multiPANEL is available to order from selected merchants and is part of a family of waterproof walls, floors and ceilings for bathrooms and beyond.

Come and visit the team on Stand 3 to see how you can add value to your bathroom jobs.

FERROLI - STAND 9

STAND CONTACT: GERRY LANAGAN

The mighty Modena HE boiler family – a boiler for every size of home

The latest addition of a 38kW model to Ferrolì's Modena HE range of high efficiency domestic boilers means this very compact, energy efficient, ultra-reliable boiler is now suitable for every size of home, from small flats to large houses.

The 38c Modena HE comes with all the same superb features as the 27kW and 32kW combi models but is still a record-beating compact size and light weight at just 600 x 400 x 350mm and 33kg. That's a massive 38kW for a mere 30mm extra depth and 1.5kg extra weight.

"The size and weight of this boiler for such high performance leaves the competition standing," said Ferrolì's Sales Director John Moran. "A comparison of the key features of the Modena HE 38c against other 38kW boilers on the market sees the Modena way out in front. No other boiler combines

the advantages of size, weight, choice of warranties and price with such superb DHW flow rates, heat output and reliability."

The 38kW combi delivers DHW flow rates of 16 l/min at 35°C rise and has a maximum heat output of 37.1kW. Extensive flueing options with a reach of up to 60m allows for increased flexibility when replacing older boilers and only four moving parts means it is highly reliable and easy to maintain. All Modena HE boilers come with the choice of a 7, 5 or 2 year warranty for complete peace of mind for both customers and installers alike.

"The 38kW model is what our installers have been asking for," John added. "Their customers have been so satisfied with the reliability, performance and affordable price of the Modena boilers they've been putting in that it's become their boiler of choice, but until now they couldn't specify a Modena

Ferrolì Modena HE 38c

for customers with larger homes. With the powerful new 38kW combi model, they can now recommend it to all householders, confident that it will deliver all the heat and hot water they could need."

The Modena range also includes three system models in 18kW, 25kW and 32kW outputs.

THE MODENA HE RANGE OF HIGH EFFICIENCY COMBI BOILERS

Very small, very light and very quiet, whatever kW output you choose. The Modena HE combi boiler is perfect for homes of all sizes.

All three models are very compact for easy handling and installation and offer superb performance, reliability and energy efficiency.

Choose from a 7, 5 or 2 year warranty, with no need to buy any extras. It's all part of the Ferrolì peace of mind promise.

The Modena HE is also available as an 18kW, 25kW and 32kW system boiler.

ES (NORDIC AB) - STAND 28

STAND CONTACT: CIANA ASPELL

ES takes a strong foothold in the Irish market

After enjoying many years' success in the Scandinavian market, ES (Nordic AB) - a leading manufacturer of Swedish renewable energy products - established a presence in Ireland in 2009. From the outset ES set out to do things differently. The ES brand of products will not be found in traditional supply chains. Instead, ES supplies its systems on a case-by-case basis directly to the home owner, business owner, plumber or developer. In all cases the ES team consults directly with the client, architects and/or engineers to design the most appropriate system solution for each application, regardless of whether it's a simple domestic retrofit, commercial project or a full housing development, "While this process is quite labour intensive on our side, it allows us to design the optimum systems to achieve real life efficiency and comfort," explained Karl O'Connell, Director. "This strategy allows us to perfect the finer details of a system, which can make the difference between an average system and a great one." ES has implemented a strict

strategy to propel the company to be the market leader of renewable energy products in Ireland. The first strategy was to establish the quality, efficiency and value offered by ES through the domestic retrofit market, while the second strategy was designed to gain market share in the domestic development sector. To achieve this, ES brought in industry experts to the company's existing team of engineers. As a result, ES now boasts an unequalled team of system specifiers and designers as well as a market leading customer service department. With these specialised departments, ES now offers the new build market a fully comprehensive package from system design right the way through to commissioning. The third strategy was designed to deal with possibly the most difficult issue within the renewable energy arena - commercial retrofit. However, together with its trade experts and market leading products, ES has now completed a variety of large commercial project which have achieved outstanding results.

NRG AWARENESS - STAND 40

STAND CONTACT:

New Irish product set to transform the heating industry

NRG Awareness has launched a revolutionary patented central heating manifold, the NRG ZONE.

The NRG ZONE was developed with support from the SEAI and EU and is set to transform the way heating systems are both designed and installed.

"The variety of exceptional heating equipment available on the market today is immense," explained Adrian Fahey of NRG Awareness. "However, in many cases these appliances are not achieving their true potential in real life installations. Condensing boilers are not condensing, retrofitted heat pump systems are not achieving the savings they should be and so on. The reason for this is that each energy efficient product requires a specific set of conditions to achieve their true potential." NRG Awareness set out to design a single

product which would create the optimum conditions for each heating appliance, increase system safety and drastically decrease system complexity and installation time. What resulted was the NRG ZONE. Adrian added, "The NRG ZONE solves a variety of issues being faced in today's efficient heating industry. By utilising the NRG ZONE, even the most complex heating systems can be designed in a matter of minutes. The unit allows for the seamless integration of heating appliances and the division of the heating system into both heating and hot water zones.

"The unit creates optimal conditions for all heating appliances, as it separates the flow, bypass and return water volumes in the system. This allows the installer to choose, within reason, the return water temperature

to each appliance, and so maximising its efficiency."

The benefits of the NRG ZONE are universal. System specifiers can design safe and efficient systems in a matter of minutes, product provider's equipment will achieve maximum efficiencies in real life installations, installers can now install energy efficient systems in a timely, cost effective manner and the end-user will experience the true efficiency of the system.

The NRG ZONE is available directly from NRG Awareness in a variety of sizes to suit applications from domestic installations right the way through to large commercial projects.

KANE255

- Measures CO, CO₂ & temperature
- Calculates O₂, CO/CO₂ ratio, efficiency
- Output to optional infra-red printer
- Data 'hold' & memory
- Long life sensors for low running costs

KANE251 As the KANE255 but...

- Higher range CO sensor (10,000ppm instead of 2,000ppm)
- Extra pre-programmed fuels include heavy oil & 'user fuel'
- Ideal for biomass fired appliances
- Available with optional factory fitted NO sensor.

Low annual service costs & 6 year extended warranty when serviced annually by Kane

The ecoTEC range of boilers.
 From Vaillant. In case you didn't know.

Vaillant are proud to be exhibiting at Dublin, Stand No. 20

For 140 years, Vaillant has been setting the standard for performance and reliability. Radiating quality and efficiency, our ecoTEC range of combi, system and open vent boilers boasts stainless steel heat exchangers, copper seams and industry-leading electronics. Backed by generous guarantees and outstanding service support, it's clear to see why Vaillant always delivers on its promise to think ahead.
